

Case Audit Settlement Evaluation, LLC & Dr. Frank Liberti & Associates

Present A 1 Hour CLE Approved Course

The Undiagnosed Bodily Injury That is Damaging to the Injured Party & the Claim

Identifying the Undiagnosed Injury That Is Harmful To the Injured & the Claim

This program is accredited as Follows:

CLE Credits: General 1.0

Research reveals a serious spine injury affects 65% of auto accident victims, (including those involved in low speed collisions), that is being overlooked in nearly 50% of the cases. This injury falls within the "Serious Injury Threshold" but it cannot be seen by the human eye, therefore leading to it being 'misdiagnosed'. Within recent years however, the AMA has approved a special radiographic diagnostic procedure that detects it within a 0.01% error rate.

It is one of the highest rated injuries by both insurers who have assigned a high set-aside case settlement valuation and the AMA Guides who have assigned a high degree of impairment rating to this injury threshold. As the procedure to diagnose it is not yet a normal part of a physician's office or an MRI center, this course explains the injury to the legal representative to better understand who is a candidate and what can be done to detect it and represent it.

Misdiagnosed, this injury severity threshold can damage the injured and the injury claim. All providers and legal representatives of injured parties should be aware of this injury severity threshold.

Seminar Agenda

8:30–9:00 a.m.	Registration
9:00–9:15	Understanding the Overlooked Injury Severity Threshold
9:15–9:25	AMA Evidence-based Research To Meet Evidentiary Burdens of Proof of Injury
9:25-9:30	Injury Effect on Loss of Function & Prognosis
9:30-9:40	Understanding the Special X-ray Procedure To Detect the Injury
9:40-9:50	Documentation Required to Represent the Injury
9:50-10:00	Exhibits & Animation as Evidence for Submission
10:00	Open Q&A
